Update The only thing that I could think of is to format my computer (Hard Drive) and back-up all of my files (Work-Wonders) to the new drive, reinstall all of the programs that I use daily and hope for the best. I feel like this is a bit drastic but, if I don't do anything, I don't see how it will get any worse. I have some free time this weekend, so I'll have to try this. Update 2 I have to give up because there was no solution to my problem (I don't feel like that's the case). I will just not post any codes or have anything to do with computers. I just don't feel comfortable in the matter of security. A: I have a solution! Just imagine a scenario where you are missing your credit card or debit card and you know you are a fairly honest person so you go to the bank to sort it out. That's when you got your password back. It's the same thing. You just have to take a screen shot and post the URL here and wait for a few minutes. Q: Reuse field label In Drupal 7, I have a form that I need to reuse it in another place. The field name is the same, but there is a different field label. How do I change it? I cannot just change the field name since it has already been published, and the other form doesn't have a field name. Thanks. A: Here is how I figured it out: Use the token, "form-for-field-name-0" Get the field name by "form_state" Store it in "hidden" variable Get the label by "form_state" Update the hidden variable with
